

Diabetes Management Certificate Program

MCV/VCU

SCHOOL OF PHARMACY
Continuing Education

CE SERIES
FALL / 2013

Target Audience: The Diabetes Management Certificate Program for Pharmacists is designed for pharmacists caring for adults with diabetes.

Goals of the Certificate Program:

The primary goals of this certificate program are to prepare pharmacists to:

1. Describe the pathophysiology, including risk factors, and presenting signs and symptoms of diabetes and its long-term complications.
2. Design, recommend, monitor, and evaluate patient-specific diabetes regimens that incorporate the principles of evidence-based medicine.
3. Identify the unique contribution of pharmacists to the interdisciplinary team caring for patients with diabetes.
4. Advance along a career path toward becoming a Certified Diabetes Educator or Board Certified-Advanced Diabetes Manager.
5. Identify the necessary components to develop a diabetes education program suitable for accreditation.

This certificate program provides 41.65 hours (4.165 CEUs) of continuing pharmaceutical education. This is comprised of a 35.65-hour (3.65 CEU) Web-based educational program (DM Educate™ Modules) and a 6-hour (0.6 CEUs) workshop.

Professional Competencies and Outcome Expectations:

This Practice-based CPE activity addresses the following professional competencies (learning objectives):

1. Identify appropriate goals and outcomes of pharmacologic treatments for patients with diabetes.

2. Discuss monitoring parameters (efficacy and toxicity), common adverse effects, and safety issues of pharmacologic treatments for diabetes.
3. Discuss how to select and modify diabetes pharmacotherapy to achieve desired treatment goals.
4. Develop an education strategy to initiate insulin therapy.
5. Discuss the impact of medical nutrition therapy on patient outcomes and establish an approach to nutrition product recommendations in response to patient queries.
6. Describe the role of pharmacists in identification and management of diabetic microvascular complications (retinopathy, neuropathy, and nephropathy).
7. Develop skills in basic diabetic foot care, including self examination and OTC product selection.
8. Devise an individualized patient education plan using the AADE7™ framework.
9. Describe the role of pharmacist participation on a multifaceted patient care team.
10. Recognize key patient-specific factors in selecting self blood glucose monitors and assistive devices pertinent to the injection of insulin.
11. Identify and track disease, cost, and quality of life outcomes in order to support reimbursement for diabetes pharmacy care services using AADE7™ System as a model.
