# RETOOLING FOR THE FUTURE!

## PHARMACIST TRAINING IN COLLABORATIVE PRACTICE

**PURPOSE:** Prepare pharmacists to become integrated team members with practices that embrace the team based care delivery model.

- This program is comprised of multiple sessions that will prepare pharmacists to take on advanced practice roles under the new scope of practice provisions now emerging in many states across the country, including Florida and Virginia.
- It will provide a level of skill development and assessment with an emphasis on patient assessment, communication skills, business plan development, and practical skills for implementing pharmacist services in the ambulatory setting.
- In addition, it offers an evidence-based approach to prevention, wellness, and treatment of common chronic conditions.
